

**PRELIMINARY DESIGNS**

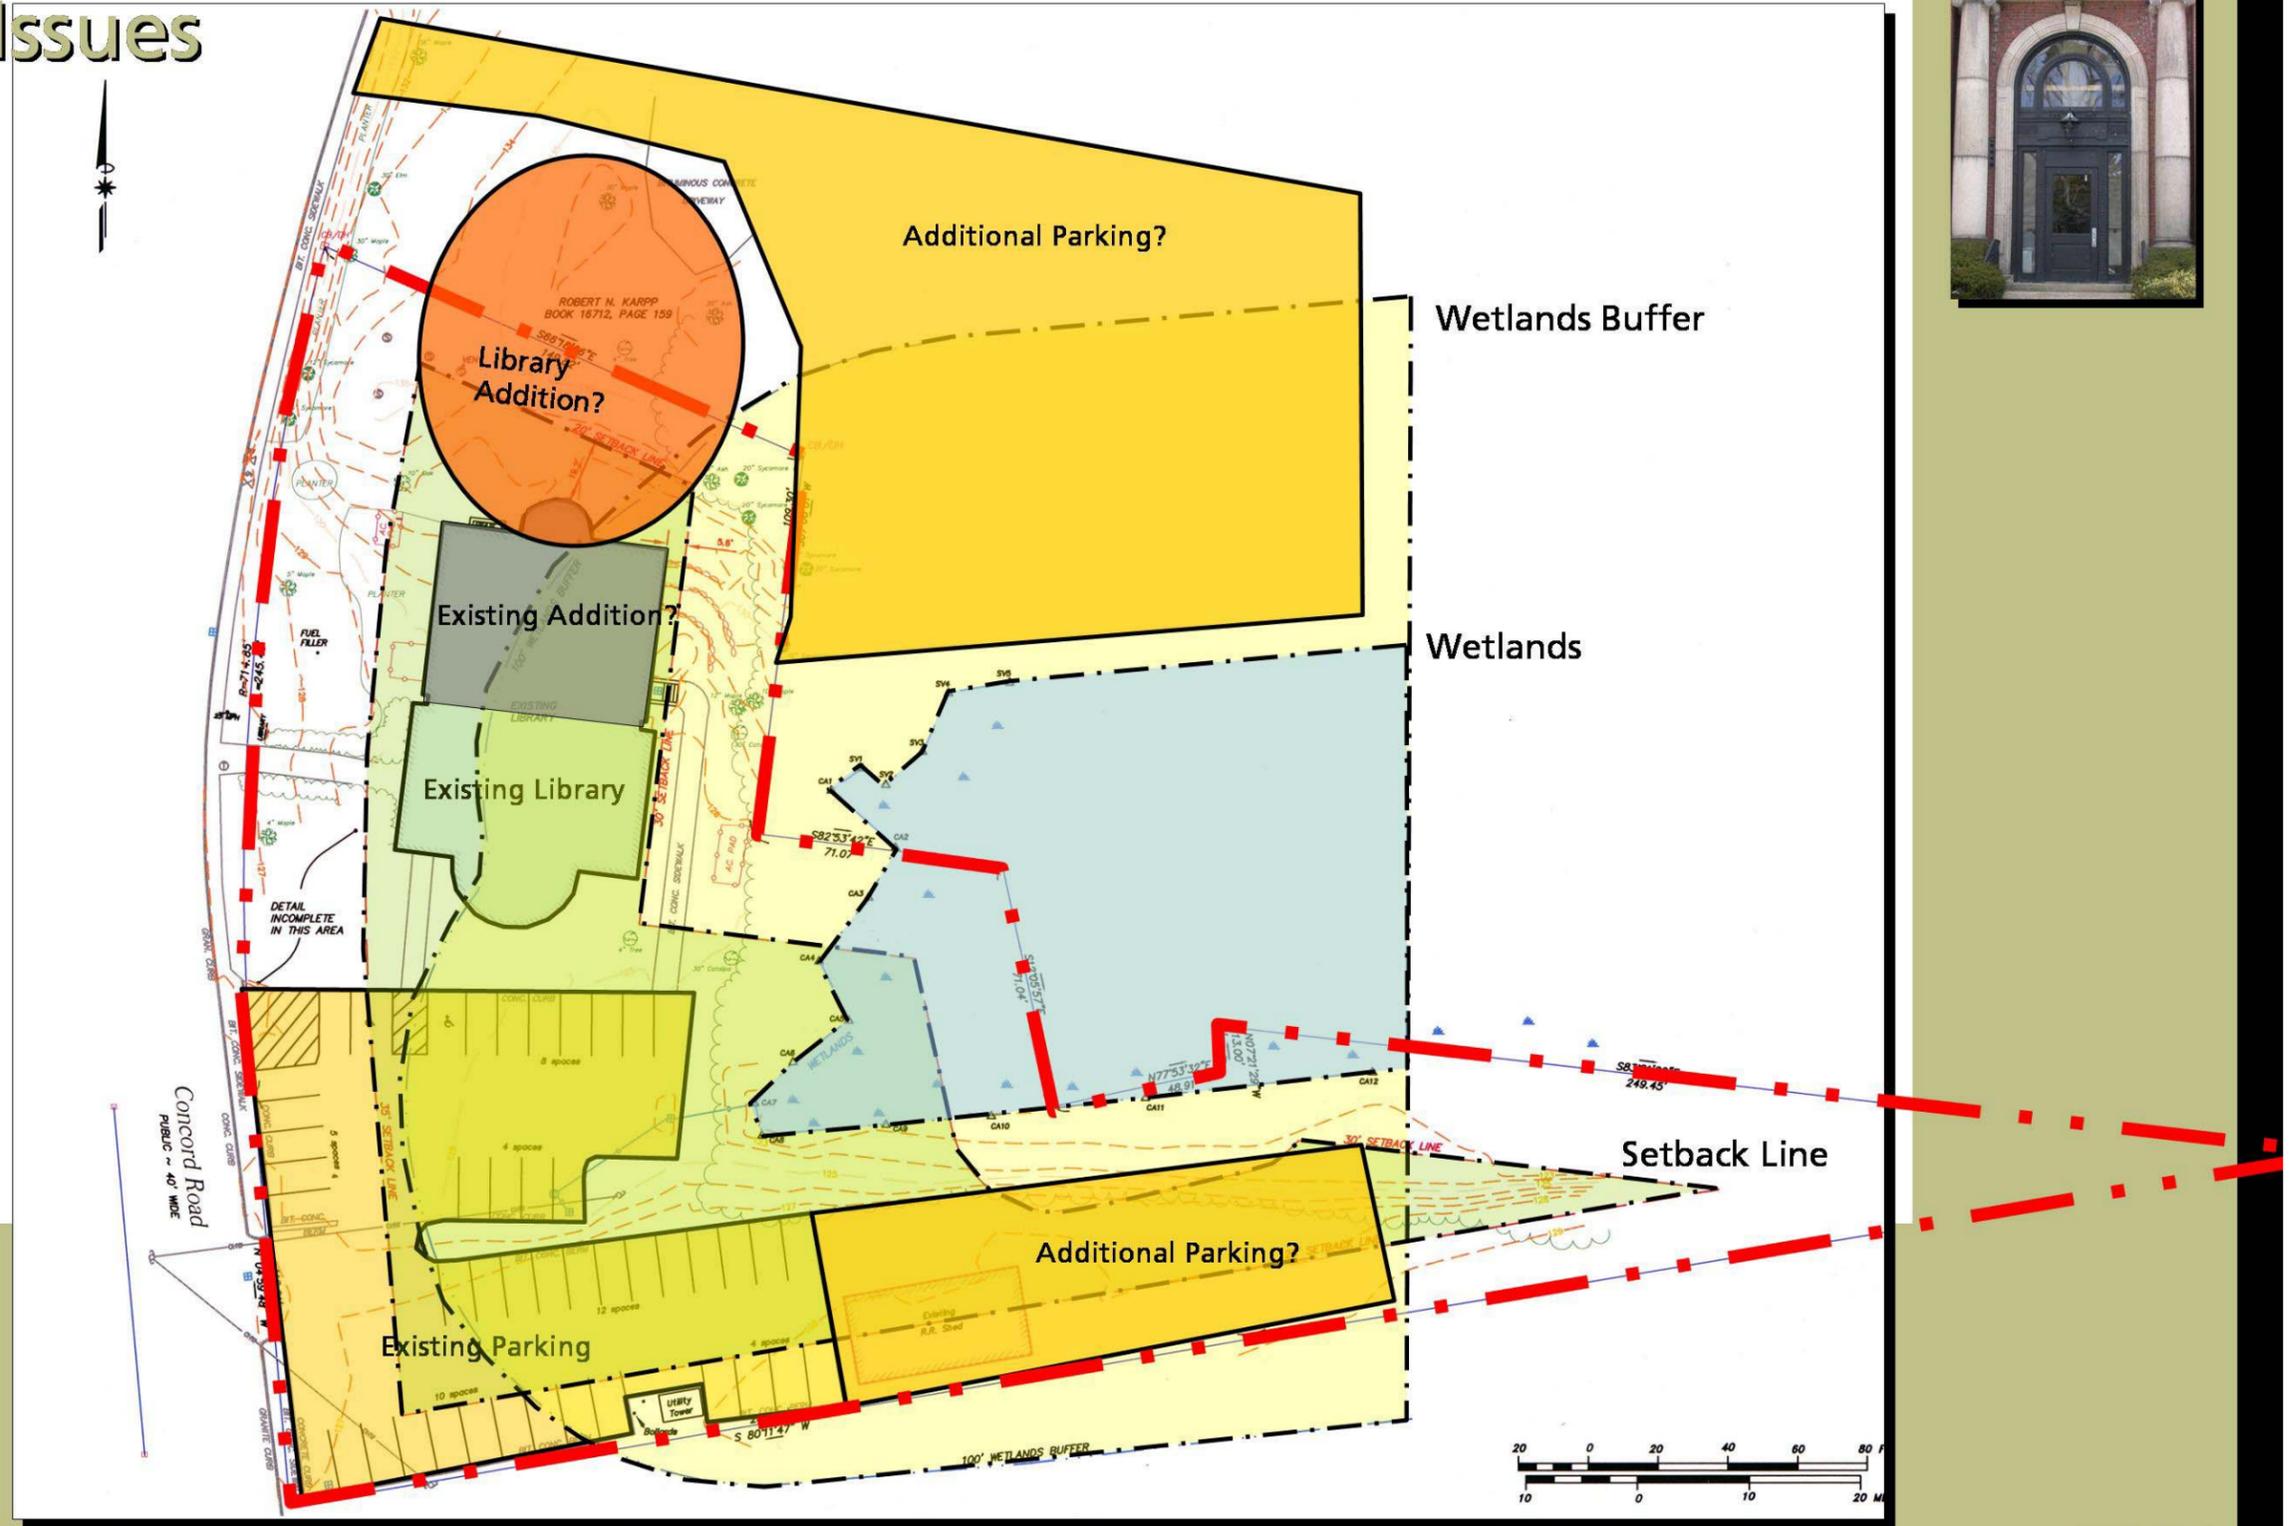

## PRELIMINARY DESIGNS

The following drawings demonstrate the evolution of the design process. Our initial consideration was given to the major site moves required for the expansion, such as the location of the addition, parking, and access onto the site. Coinciding with the site investigation, the design team looked at the building program itself to better understand how the library would function and meet the needs of the public and staff (see sheets H.1 & H.9). While these options created a very compact and efficient structure it became clear that locating a large addition to the north of the original historic library was not an appropriate response to the site. Considering the scale of the historic building the goal became to create an addition that was more in keeping with the desired aspects of a New England town's landscape. In keeping with this intent, the expansion of the library evolved into a building that was made up of several smaller pavilions with green space in between them that were connected by a interior circulation path (see sheets H.11 - H.24).
